

## **NACO-DS 1060**

## Wetting and Dispersing Additive (Solvent Based)

General wetting and dispersing additive for solvent-borne coatings for stabilizing fillers, organic, inorganic, and carbon black pigments in all kinds of resin systems such as two-pack polyurethane and chlorinated polymer systems, two-pack epoxy resin systems, alkyd/amino resin combinations, nitrocellulose systems, solvent-based primer and base-coat of automotive coatings (saturated polyester systems), solvent-based primer and base-coat of coil coatings.

## **Product Data**

| Composition:   | High molecular weight polycarboxylic acid  |   |
|--|--|---|
| <b>Typical Properties:</b><br><b>Note:</b> This information is intended as a guideline only and should not be used to issue specifications. Slight deviations do not affect application and capability of the product.   | Physical Form:<br>Active Content:<br>Density (20 °C):<br>Acid Value:<br>Non-volatile matter<br>(10 min., 150 °C):  | Clear light yellow liquid<br>55-60%<br>0.90-1.00 g/ml<br>120-130 mg KOH/g<br>55-60% |
| Applications   |  |   |
| Applications > Recommended for<br>> Particularly Recommended:  | Coatings > Solvent based systems<br>> All kinds of resin systems (Alkyd, PU, Epoxy, Polyester,<br>Nitrocellulose)  |   |
| Recommended Levels:  |  |   |
| <b>Note:</b> The properties and performance of<br>the additive are greatly dependent upon<br>the specific formulation in which it is<br>utilized and, consequently, should always<br>be tested (possibly at different treatment<br>levels, temperatures, and/or time intervals)<br>to verify performance before use. | Based on<br>Total formulation weight:<br>Titanium dioxide:<br>Inorganic pigments:<br>Organic pigments:<br>Carbon black:  | 0.3-0.5%<br>2%<br>3-5%<br>4-6%<br>8-10%   |
| Special Feature:   | Compatible with all resin types  |   |
| Incorporation and Processing<br>Instructions:  | For optimum performance, the additive must be incorporated into the mill base before the addition of pigments.   |   |
| Storage and Transportation:  | Separation or turbidity may occur at low temperatures. Heat to 30-40 °C and stir. The minimum shelf life in closed containers is 12 months from the date of manufacture. |   |

Our technical suggestions are based on data from many experiments and cannot represent a warranty of any kind as to their performance in other formulations. Customers must always verify our product's performance in their own systems. This technical data sheet replaces all previous issues.
